

Model 2601 Pica Blender Mill

The Pica Blender Mill employs a hand-pestle type of motion that achieves particle size reduction by a combination impact and mulling action. The mortar consists of a tubular vial approximately 2-1/2" long and 1" ID (other sizes on request). The tube is fitted with removable end caps for easy cleaning. End caps are held onto the tube by means of rubber "O" rings which gives a gas tight seal.

Features
Grind or blend 3 samples
Heavy duty construction
Low vibration
Quiet operation
Shipped Complete, ready to work
