

Filters & Screens

Endecotts have been a primary manufacturer of high quality filter elements for over 60 years. All types of filters are supplied to almost every conceivable industry from hydraulic to air and process filtration. Filter types include cartridges, spin-ons, baskets and strainers.

**Outstanding quality -
competitive price**

For the man-made fibre industry

Endecotts produce a wide range of high quality extruder pack screens for the synthetic fibre industry.

The screens are specially manufactured to meet the stringent requirements necessary for fibre production, particularly the high operating temperatures and pressures. They are competitively priced and already widely used in plants around the world.

Endecotts pack screens are available in sets or part sets, or can be manufactured to your individual requirements.

For general applications

Endecotts manufacture high quality filters, screens and strainers for all types of general engineering processing applications. These can be produced in woven wire mesh and/or perforated plate, in a variety of materials and to virtually any shape or size.
